Summary

As a full-stack MERN developer, I specialize in developing scalable and robust web applications using MongoDB, Express, React, and Node.js. With 2 years of experience in the field, I have developed a deep understanding of the MERN stack and how it can be leveraged to build modern and responsive web applications.

I have a solid foundation in front-end development using React, Redux, and other libraries and experience in back-end development with Node.js and Express. Additionally, I am proficient in database management using MongoDB, and have experience with different database technologies such as MySQL and PostgreSQL.

Skills

ReactJS, VueJS, typescript, NodeJS, ExpressJS, MongoDB, PostgreSQL, firebase, GraphQL

Projects

Decentralized Exchange:

Our university FYP was focused on the research and development of a Decentralized Exchange Platform. The aim was to create a decentralized and secure marketplace where users could trade digital assets directly without relying on intermediaries.

Tutor Hub:

Tutor Hub was a client project that aimed to create an innovative online marketplace for students to find the best tutors for their educational needs. The platform was designed to connect students seeking academic assistance with experienced tutors.

Bus Link:

Bus Management System was a semester project that developed with the goal of creating a user-friendly platform for managing bus operations. It allowed users to search for buses, reserve tickets, provide feedback, and offered a range of additional features.

Certifications

I have achieved multiple certifications in the fields of cybersecurity, cloud computing, and web application development, demonstrating my commitment to continuously expanding my knowledge and expertise in these crucial areas of technology.
